

MONTANA'S SUPERSTATION

KBZM-KKQX COVERAGE MAP

KBZM's transmitter site is situated on Lone Peak in Big Sky, MT, at 11,166 ft., the highest transmitter location in the Great Northwest and third highest in the continental U.S.A. While mountain ranges degrade other signals, KBZM is over a mile higher than any other site. The addition of **KKQX** in 2006 introduced a clean, clear signal to the Gallatin Valley, specifically Bozeman and Belgrade. Together KBZM and KKQX deliver an area of coverage unmatched by any other combo or group of stations...that's why we are **Montana's SuperStation!**
