

MONTANA'S SUPERSTATION NETWORK

MONTANA'S SUPERSTATION NETWORK is the only way for you to reach the most populated and fastest growing area in SW Montana in its entirety. From river valleys to snow capped peaks and open ranch lands, the topography makes it very difficult for any other single station, combo or group of radio stations to fully cover the entire landscape . . . that is, until **MONTANA'S SUPERSTATION NETWORK: KBZM-KKQX.**

Dial: 104.7
Power: 100kw

KBZM

broadcasts from the highest transmitting point in the great Northwest at the summit of Lone Peak in Big Sky - one of the wealthiest areas in the Rocky Mountains - and serves not only the Big Sky area, but West Yellowstone (along with a very large segment of Yellowstone National Park), the northern reaches of Idaho to the south, Belgrade and parts of Bozeman, along with Manhattan, Three Forks, the Paradise Valley to the east, the entire Madison Valley including Ennis to the west and all way to Butte, and north toward Helena.

Dial: 105.7
Power: 25kw

KKQX

was born in 2006 to duplicate KBZM's format and leverage its existing popularity, and to focus KKQX's signal on the greater Bozeman and Belgrade metro - where KBZM's signal is weaker - superserving adult listeners 30-60 there with a tested formula for success. KKQX broadcasts from the High Flat area on the west side of Bozeman. The addition of KKQX elevated the two combined signals into true Network and SuperStation status. With such a large portion of the population and retail spending coming from outside of the metro area, KBZM's huge regional signal plays a vital role in the *SuperStation Network* mix with KKQX.
